

After an AI mistake

Record one finding, its affected work and the decision about the next use.

Add detail or another page when the task requires it. Fields can be typed or completed by hand.

Task and version

Identify intended use and the answer or draft being checked.

Finding and evidence

What requirement failed? What is confirmed, suspected or still unknown?

Pause and preserve

Which use is on hold? Which discovered version did you keep?

Affected work

List copies, calculations or decisions, owners and uninspected uses.

Repair and retained work

What changed? What evidence supports the material kept?

Check and limit

Name inputs or source, procedure, version, result and what remains open.

Next use and responsible person

Continue within scope, reduce, hold, escalate or finish another way. Name owner and review condition.

Shared consequences and next check

Who needs a correction or follow-up? What will you check next time?

A correct amount does not settle missing evidence or permission. Keep the scope and decision owner visible.

Companion to When AI Gets It Wrong by Lynn Walker | WinMedia
